Triple sheeting: better beds, faster turnovers, lower running costs

Triple sheeting is the accepted way hotels and motels make up a bed. A flat top sheet replaces the quilted bedspread, so the layer every guest touches is laundered after every stay. Here's why it works, and a calculator on page 2 to test it against your own property.

What triple sheeting is

Instead of a quilted bedspread on top, the duvet inner, which is the primary warmth layer, sits under a flat top sheet, over two flat sheets the guest sleeps between. Every layer that touches a guest is a flat sheet that is laundered departure-clean.

1. **Bottom sheet** over the mattress protector.
2. **Second sheet** laid over the bottom sheet. The guest sleeps between the bottom and second sheet.
3. **Duvet inner** on top, kept away from the guest.
4. **Top sheet** over the duvet, folded back and tucked tight with hospital corners.

Top sheet	Folded over the duvet
Duvet inner	Protected both sides
Second sheet	Guest sleeps under this
Bottom sheet	Guest sleeps on this
Quilted mattress protector	Hygiene barrier
Mattress & topper	Never laundered

Why properties switch

The benefits show up in three places: the guest's experience, the housekeeping trolley and the laundry bill.

Visibly hygienic

Guests see fresh, white, flat-laundered sheets on both sides of the duvet. That reassurance matters to travellers who check the bed before they sleep in it.

Departure-clean every time

A quilted bedspread is too bulky to launder after every guest, so it rarely is. A top sheet is laundered after every stay, so no guest sleeps under the last guest's layer.

Easier laundry

Flat sheets are light, wash and dry quickly and feed straight through a flatwork ironer. Bulky quilted bedspreads take up machine capacity and drying time.

Simpler stock

One flat sheet type per bed size does every job on the bed. A coloured hemstitch shows the size, so sorting and par counts are simpler.

Timeless presentation

A tight, crease-free white bed photographs well and reads as professional, which is what online bookers are judging from.

Flexible warmth

Add or remove a blanket or bed runner by season without changing the core make-up of the bed.
